Microsoft .Net Framework	Microsoft .Net Framework 4.5.2 and above	

Downloading

Please refer to the following link on the Exclaimer website:

<http://www.exclaimer.com/signature-manager-exchange-edition/download>

Installing

Download the **Signature Manager Exchange Edition 2.2.8** installation file - **setup.exe** - and run on the Microsoft Exchange Hub Transport Server and/or Microsoft Exchange Mailbox server (Exchange 2013 & 2016). If required, an **MSI** is available from support by contacting support@exclaimer.com.

Uninstalling

Uninstall can be achieved via the **setup.exe** or **MSI** for the currently installed version of Signature Manager Exchange Edition, or via **Programs and Features** in your operating system.

Configuration files are located in **\ProgramData\Exclaimer Ltd\Mail Disclaimers** and these are not removed as part of the uninstall process. The uninstall process does not lose any of your configuration or settings however, as a backup precaution you may wish to export your configuration, as summarised below:

Export Steps

1. Open the Exclaimer Console.
2. Select the 'Exclaimer' node.
3. Open the 'Action' menu.
4. Select 'Export Configuration...'
5. Select a location and filename for the export.
6. Press Save.

This exports all settings, including templates and licensing data.

Upgrading

Upgrading can be achieved via the **setup.exe** file, which will perform an in-place upgrade.

Fixed Issues

- Messages sent to distribution groups did not have the sent item updated.
- **Error: The file name is empty or contains only whitespace** error was displayed when the Windows temporary files directory was full. Improved the error message to indicate that the temporary files directory is full.
- **System.NullReferenceException** error was displayed when clicking on the **Condition Applies?** policy tester icon.

Enhancements

- Improved retry strategy for updating sent items that cannot be initially found.
- Ability to update sent items that reside in a different folder than the default Sent Items folder.
- Improved event logging in a separate Sent Items Update application log.
- Stability and performance enhancements for the Sent Items Update Service.

Note: To benefit from enhancements to the Sent Items Update feature, the **Sent Items Update Configuration wizard** must be re-run. To do this, access the Exclaimer console, select the **Sent Items Update** branch and use the **configure sent items update service** button on the **settings** tab.
